Eco-Blocks and Energy Efficient Homes Ltd. (EEH)

Energy Efficient Homes Limited is a national, thermally efficient home designer and inventor of the "Digital Self-Heating Home" system.

For the last year EEH has decided to exclusively use Eco-Block ICF units as part of it's Digital Self-Heating home system. We moved to exclusivity from other ICF providers. We are also presently designing complete homes based on this technology.

Key aspects we have found with the product, not found anywhere else, are:

- ☑ Much higher insulation R values, exceptionally important in EEH's.
- ☑ Thicker insulation means sturdier and easier to build walls on site, and they are less prone to blowout
- ☑ This means more productivity
- ☑ The Eco-Block staff have been most helpful during the development phases and we have hired their professionals to train our builder/dealers, with excellent results in the proper installation and procedures. This has converted many into believers.

Our experience has been excellent to date and we expect to continue this relationship well into the future as EEH gears up this year to increase the marketing impetus of it's "Digital Self-Heating Home" product which relies on the R Value and structural integrity of the product.
